ASSUMPTIONS

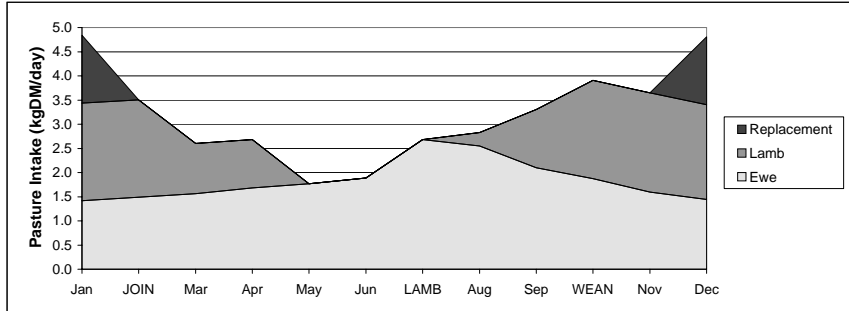

1. Flock Parameters

Flock mortality	4%	Ram %	2%
Productive life	5 years	Marking %	123%
Ewe body weight	65 kg	Weaning %	120%
DSE rating /ewe	2.6	Selling age	6-8 months
Stocking rate/ha	10 dse's		

This enterprise is usually run on more productive country and the stocking rate reflects this.

2. Feed Requirements per breeding ewe

Intakes are estimates based on a pasture that would meet the requirements of all stock at all times. If pasture is above or below this amount, intakes will be more or less (respectively) and livestock performance will vary accordingly. Feed requirements are expressed as kilograms dry matter intake per ewe per day. The intake of all lambs and hoggets are divided by the number of ewes and allocated to the breeding ewes.

Note: Pasture cost calculated at 90kg of single super applied every year - \$550/ton and \$8/ha application cost.

The cost of the grazing crop includes contract harvesting.

3. Flock Structure

Sheep numbers are modified to reflect mortality throughout the year.

Age	Number of ewes
1.5	217
2.5	208
3.5	200
4.5	192
5.5	184

\$109.20	\$28.26	\$32.72	\$37.22	\$41.72	\$46.19

Notes: both the lamb price and weaning percentage have been varied by +/- 10% and +/- 20%, lamb price is average of the two grades - marking percentage is held at 3% above the weaning percentage in all cases.
