

COTTON (Roundup Ready Flex® Bollgard II® - Single Skip)

Farm Enterprise Budget Series - North-East NSW
Summer 2012-2013

1. GROSS MARGIN BUDGET: INCOME:

			Sample Budget \$/ha	Your Budget \$/ha
Lint -	4.00 bales/ha at	\$380 */bale (at gin).....	\$1,520.00	
Seed -	1.44 tonnes/ha at	\$190 /tonne (at gin).....	\$273.60	

* \$20/bale reduction assumed due to quality reduction compared to irrigated cotton

Crop prices were correct at the time of writing (Aug 2012), world market volatility makes estimation of future pricing impractical.

A. TOTAL INCOME \$/ha: **\$1,793.60**

Refuge crop - unsprayed Roundup Ready Flex® cotton @ 10%									34.52
TOTAL COSTS:									1,344

NOTES:

MANAGEMENT:- Each grower is required to grow a refuge crop as part of preventative resistance management. Since the refuge crop is an integrated part of growing Bollgard II® cotton, refuge crop costs have been included as part of the gross margin budget.

For the purposes of this example, we have used unsprayed (i.e. no insecticides) Roundup Ready Flex® cotton at 10% of the Bollgard II® area. Please refer to the Monsanto Bollgard II® Resistance Management Plan for more information on refuge crops and minimum requirements.

For more detailed information, see the Cotton CRC "Cotton Pest Management Guide 2012-13" at www.cottoncrc.org.au

SEED: Seed costs per kg will vary with the time of ordering and the seed treatment chosen.

HERBICIDES: Fallow herbicides have been substituted for cultivation during the winter to avoid soil compaction. To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques.

Use of a particular formulation does NOT imply recommendation of that formulation by NSW DPI.

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

LICENCE FEES: * This example uses Monsanto Cotton Choices™ Option 1 which provides a discount on the technology licence fees for 2012-13. However you should choose the option which best suits your operation, <http://www.cottonchoices.com.au>

DEFOLIANT: Good conditions are required to get the best performance. The choice of defoliant and rate used depends on the moisture status of the plant and seasonal conditions.

LABOUR REQUIREMENTS:

- labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$22.24, reducing the gross margin to \$427 /ha.

MACHINERY ASSUMPTIONS:

Tractor: 170 KW PTO (230 HP) and 200 KW engine (265 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide

This budget should be used as a GUIDE ONLY and should be changed by the grower to take account of movements in crop and input prices, changes in seasonal conditions and individual farm characteristics. Estimated prices are GST exclusive.

harvest	Mar	contract		76.24	per ha incl fuel			76.24
Grains Research Levy				1.0%	of farm gate value			6.82
Grading & bagging	May	contract		\$90 /t				90.00

AGRONOMIC NOTES:

Insects: Closely monitor crops for thrips, mirids (particularly at budding and flowering), heliothis and green vegetable bug.

Weeds: To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques. Ensure weed escapes are controlled before they can set seed.

Sowing: Can be sown by direct drill into cereal stubble. Banjo (black-eye) cowpeas should only be grown under very favourable dryland conditions, they are a larger seed than Caloona so seed rate 25-40 kg/ha. Seed price used includes inoculant, ensure cowpeas are well inoculated to ensure nitrogen fixation.

Fertiliser: Fertiliser requirements should be based on paddock records and soil tests.

Soil: Best suited to sandy and loam soils.

Price: Accurate price prediction is difficult as price can vary greatly with supply and demand. The price indicated is delivered ex-store on a clean seed basis (i.e. you will need to add cartage). Price will vary with the variety grown and grade achieved.

Insurance: ** Varies with local government area and postcode, check with your insurer.

For further information, refer to the NSW DPI Agfact "Cowpea, lab lab and pigeon pea" P4.2.21

Use of a particular brand name does NOT imply recommendation of that brand by NSW DPI.

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

harvest: harvest management is crucial to ensure a high quality, high proportion clean seed yield.

Grading losses may vary substantially and depend upon harvesting management.

LABOUR REQUIREMENTS: - labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$16.28, reducing the gross margin to \$233 /ha.

MACHINERY ASSUMPTIONS:

Tractor: 130-140 KW PTO (173-180 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide

This budget should be used as a GUIDE ONLY and should be changed by the grower to take account of movements in crop and input prices, changes in seasonal conditions and individual farm characteristics. Estimated prices are GST exclusive.

DRYLAND MAIZE (No-till, feed)

Farm Enterprise Budget Series - North-East NSW

Summer 2012-2013

1. GROSS MARGIN BUDGET:

INCOME:

3.75 tonnes/ha at \$240.00 /tonne (on farm).....

Sample Budget \$/ha	Your Budget \$/ha
\$900.00	

5.5 t/ha is achievable on the Liverpool Plains, but an average range of 3-4 t/ha is more likely. Yields in other areas are on average 2.5-3.5 t/ha. Cartage costs vary, so have not been included. The on-farm price used is after cartage. Crop prices were correct at the time of writing (Aug 2012), world market volatility makes estimation of future pricing impractical.

harvest #	Apr	contract		78.74	per ha incl fuel			78.74
Grains Research Levy				0.72%	of farm gate value			6.48

AGRONOMIC NOTES:

Sowing: Maize can be sown when soil temperatures at 10 cm reach 12°C at 9am (EDST) and on a rising plane, and when the risk of frost is over. Dryland maize should only be grown in the most favourable slopes areas or where higher than average district sorghum yields are consistently achieved. Seed price is assumed to include pre-treatment with insecticide.

Weeds: To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques.

Fertiliser: Fertiliser requirements should be based on paddock records and soil tests. * Maize is sensitive to zinc deficiency.

Insurance: ** Varies with Local Government Area and postcode, check with your insurer.

Harvest costs based on \$60/ha for a crop up to 2.5 t/ha with estimated increment of \$1.00 per extra 100 kg/ha above 2.5 t/ha.

For further information refer to the NSW Department of Primary Industries "Summer Crop Production Guide 2012-13".

Use of a particular brand name does NOT imply recommendation of that brand by NSW DPI.

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

LABOUR REQUIREMENTS:

- labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$18.99, reducing the gross margin to \$298 /ha.

MACHINERY ASSUMPTIONS:

Tractor: 130-140 KW PTO (173-180 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

Note: harvest requires a corn front.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide

DRYLAND MUNGBEANS (No-till, Double-crop)

Farm Enterprise Budget Series - North-East NSW

Summer 2012-2013

1. GROSS MARGIN BUDGET:

INCOME:

Yield	1.20 tonnes/ha	
1.06 tonnes/ha at	\$850.00 /tonne (clean seed, processing grade).....	\$897.60
0.14 tonnes/ha at	\$160.00 /tonne (gradings).....	\$23.04

Sample Budget \$/ha	Your Budget \$/ha
\$897.60	
\$23.04	

Crop prices were correct at the time of writing (Aug 2012), world market volatility makes estimation of future pricing impractical.

A grading percentage of 12% is assumed, but it will vary according to crop and harvest conditions.

A. TOTAL INCOME \$/ha:

\$920.64

VARIABLE COSTS:

see following page(s) for details

Sowing.....	\$66.07	
Fertiliser & application.....	\$50.50	
Herbicide & application.....	\$40.87	
Insecticide & application.....	\$35.86	
harvesting.....	\$76.24	
Levies and insurance.....	\$49.35	
Grading & bagging.....	\$108.00	

B. TOTAL VARIABLE COSTS \$/ha:

\$426.89

C. GROSS MARGIN (A-B) \$/ha:

\$493.75

2. EFFECT OF YIELD AND PRICE ON GROSS MARGIN PER HECTARE:

SENSITIVITY TABLE

Grains Research Levy				1.02%	of farm gate value			9.39
Grading & bagging	May	contract		\$90 /t				108.00

AGRONOMIC NOTES:

Mungbeans can be an ideal opportunity double crop following winter cereals. Soil moisture profiles must be replenished if satisfactory yields of high quality beans are to be produced. Best suited to loam and heavier soils.

Weeds: Select a paddock free of broadleaf weeds. Good weed control is essential. To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques. Ensure weed escapes are controlled before they can set seed.

Pests: Closely monitor crops for thrips, mirids (from pre-budding and flowering), heliothis and green vegetable bug.

Fertiliser: If applying phosphate fertiliser, use a fertiliser that contains good levels of sulfur as well, e.g. single superphosphate. Fertiliser requirements should be based on paddock records and soil tests.

Desiccation: Usually required to even up crop maturity across a paddock and to prevent additional flowering.

Harvest: Use air assist headers to reduce losses at harvest. Harvest costs based on \$70/ha for a crop up to 2.5 t/ha. Communicate with your buyer throughout the season and have storage options available.

Insurance: ** Varies with Local Government Area and postcode, check with your insurer.

For further information, refer to the NSW DPI Agfact, "Mungbeans" P4.2.19 and the NSW DPI "Summer Crop Production Guide 2012-13", "Mungbean management guide 2011"

http://www.daff.qld.gov.au/26_19754.htm and the Australian Mungbean Association

<http://www.mungbean.org.au/>

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

Use of a particular brand name does NOT imply recommendation of that brand by NSW DPI.

PRICE: - The price given is for processing grade mungbeans at the time of writing.

Consult marketing sources for more up to date price information.

LABOUR REQUIREMENTS: - labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$10.85, reducing the gross margin to \$483 /ha.

MACHINERY ASSUMPTIONS:

Tractor: 130-140 KW PTO (173-180 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide

This budget should be used as a GUIDE ONLY and should be changed by the grower to take account of movements in crop and input prices, changes in seasonal conditions and individual farm characteristics. Estimated prices are GST exclusive.

PERENNIAL TROPICAL GRASS PASTURE

Farm Enterprise Budget Series - Northern NSW

Chromosols (red soils)

Cost every 2 years				\$45.00	
B. Total Variable Costs \$/ha/year				\$22.50	

NOTES:

Use of a particular brand name does NOT imply a recommendation of that brand by NSW DPI.

Preparation: This budget does not allow for costs prior to pasture establishment, such as forage oats crops.

Fertiliser: Fertiliser requirements should be based on paddock records and soil tests. Nitrogen fertiliser may need to be used if there is no legume in the pasture being sown.

Costs vary widely across the region, depending on the objective of the enterprise, sowing time or location.

Different soils have different requirements in terms of fertiliser rates.

Pasture varieties: The varieties in the budget are an example only, check pasture variety recommendations for your rainfall zone and soil type.

For detailed information please refer to other publications on pasture production, including "Pasture Production for Livestock" or the "Pasture Planner" on the NSW DPI website (www.dpi.nsw.gov.au/agriculture), which has extensive information on varieties and their suitability to each zone of NSW.

Suggested average planting establishment success rates:

High rainfall zone (east of Moree/Newell Highway) 2 in 3 years

Medium rainfall zone (west of Moree/Newell Highway) 2 in 3 years

Low rainfall zone (Walgett) 1 in 4 years

Machinery - Tractor pto power: 57 KW PTO (76 HP) AND 63 KW ENGINE (86 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well.

DRYLAND GRAIN SORGHUM (No-till)

Farm Enterprise Budget Series - North-East NSW
Summer 2012-2013

1.GROSS MARGIN BUDGET:

INCOME:

4.50 tonnes/ha at \$210.00 /tonne (on farm).....

Sample Budget \$/ha	Your Budget \$/ha
\$945.00	

8 t/ha is achievable on the Liverpool Plains, but an average range of 4-5 t/ha is more likely. Yields in other areas are on average 3.5-4 t/ha. Cartage costs vary, so have not been included. The on-farm price used is after cartage. Crop prices were correct at the time of writing (Aug 2012), world market volatility makes estimation of future pricing impractical.

A. TOTAL INCOME \$/ha:

\$945.00

VARIABLE COSTS:

harvest #	Mar/Apr	contract		86.24	per ha incl fuel			86.24
Grains Research Levy		1.020%	of farm gate value				9.64	9.64

AGRONOMIC NOTES:

No-Till sorghum requires a high level of management and greater input of herbicide and fertiliser than "conventional tillage" sorghum. However, it results in higher yields (often 15%) and allows more planting opportunities (due to longer retention of sowing moisture). It is also an excellent means of reducing soil erosion through stubble retention.

Insects: Heliothis control assumed to be required every year.

Fertiliser: Fertiliser requirements should be based on paddock records, soil tests and planting region.

Sowing: Seed price is assumed to include pre-treatment with insecticide and seed safener.

Planting time: Planting sorghum after the end of December significantly increases the risk of sorghum ergot, which can cause a substantial decline in yields and unsaleable grain. It also results in slower drydown time and the possible need for aeration to dry grain.

Weeds: To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques. Wetter rate assumes spray rate of 100 L/ha. Paraquat + diquat is included as a double-knock for herbicide resistance management.

Insurance: * Varies with Local Government Area and postcode, check with your insurer.

Harvest costs based on \$60/ha for a crop up to 2.5 t/ha with estimated increment of \$1.00 per extra 100 kg/ha above 2.5 t/ha.

For further information refer to the NSW DPI "Summer Crop Production Guide 2012-13" and the Grain Sorghum Agfact, P3.3.5.

Use of a particular brand name does NOT imply recommendation of that brand by NSW DPI.

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

LABOUR REQUIREMENTS: - labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$18.99/ha, reducing the gross margin to \$458 /ha.

MACHINERY ASSUMPTIONS: Tractor assumption: 130-140 KW PTO (173-180 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide

his budget should be used as a GUIDE ONLY and should be changed by the grower to take account of movements in crop and input prices, changes in seasonal conditions and individual farm characteristics. Estimated prices are GST exclusive.

1.05	\$117	\$202	\$288	\$373	\$459

Assumptions

* 5.2 t/ha of dry matter is enough for 5 steers/ha

* 0.9 kg/day weight gain assumed, with benefit from sulphur blocks

Reference: K. A. Archer and J. L. Wheder (1978) "Response by cattle grazing sorghum to salt-sulphur supplements", *Australian Journal of Experimental Agriculture and Animal Husbandry*, Volume 18.

An experiment is reported in which cattle grazed fertilized sorghum x sudangrass. Liveweight gain was increased by approximately 200 g/head/day by the provision of salt blocks containing 18 per cent sulphur (P = 0.01) and to a lesser extent by salt alone.

* Costs per head: 5-in-1 vaccine \$0.33, drench \$2.75, \$1.56/head for sulphur block (25g/day for 90 days → 2.25 kg/hd @ \$0.80/kg)

Insecticide - deltamethrin ULV	Feb	0.05	51.87	2.59	2.5 L	11.18	27.95	30.54
Insecticide - deltamethrin ULV	Mar	aerial spray		20.00	2.5 L	11.18	27.95	47.95
harvest (contract) #	Apr	contract		76.24	per ha incl fuel			76.24
Grains Research Levy				1.02%	of farm gate value			7.27

AGRONOMIC NOTES:

Sowing: Dryland soybeans can be a risky crop to grow. Sow only in most favoured areas on full sub-soil moisture profiles.

Fertiliser: Fertiliser requirements should be based on paddock records and soil tests.

Insects: Closely monitor for green vegetable bug and heliothis. Deltamethrin is used for green vegetable bug control in this example.

Weeds: Select a paddock free of broadleaf weeds. To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques. Ensure weed escapes are controlled before they can set seed. Paraquat + diquat is included as a double-knock for herbicide resistance management.

Insurance: ** Varies with Local Government area and postcode, check with your insurer.

Harvest: Crops that have poor grain prospects at flowering can be turned into good quality hay.

Harvest costs based on \$70/ha for a crop up to 2.5 t/ha.

Insurance: ** Varies with local government area and postcode, check with your insurer.

For further information, refer to the the NSW DPI "Summer Crop Production Guide 2012-13", the NSW DPI Agfact, "Soybeans" P5.2.6 and Primefact- Soybeans: Inland Northern NSW Planting Guide

Use of a particular brand name does NOT imply recommendation of that brand by NSW DPI.

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

LABOUR REQUIREMENTS: - labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$17.63, reducing the gross margin to \$302 /ha.

MACHINERY ASSUMPTIONS:

Tractor: 130-140 KW PTO (173-180 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide

This budget should be used as a GUIDE ONLY and should be changed by the grower to take account of movements in crop and input prices, changes in seasonal conditions and individual farm characteristics. Estimated prices are GST exclusive.

DRYLAND SUNFLOWERS (No-till, mono-unsaturated)

Farm Enterprise Budget Series - North-East NSW

Summer 2012-2013

1. GROSS MARGIN BUDGET:

INCOME:

1.60 tonnes/ha at \$520.00 /tonne (on farm).....

Sample Budget \$/ha	Your Budget \$/ha
\$832.00	

Cartage costs will vary with distance, so have not been included. The on-farm price is after cartage.

Crop prices were correct at the time of writing (Aug 2012), world market volatility makes estimation of future pricing impractical.

A. TOTAL INCOME \$/ha:

\$832.00

VARIABLE COSTS:

see following page(s) for details

Sowing.....	\$65.31	
Fertiliser & application.....	\$162.80	
Herbicide & application.....	\$77.21	
Insecticide & application.....	\$46.03	
harvesting.....	\$66.24	
Levies and insurance.....	\$43.51	

B. TOTAL VARIABLE COSTS \$/ha:

\$461.11

C. GROSS MARGIN (A-B) \$/ha:

\$370.89

2. EFFECT OF YIELD AND PRICE ON GROSS MARGIN PER HECTARE:

(A) SENSITIVITY TABLE

YIELD tonnes/ha	On Farm Price

Uptake oil	Oct	with above			0.50 L	6.97	3.49	3.49
Insecticide - alpha-cypermethrin 100 g/L EC	Dec	aerial spray		20.00	0.4 L	7.54	3.02	23.02
Insecticide - alpha-cypermethrin 100 g/L EC	Jan	aerial spray		20.00	0.4 L	7.54	3.02	23.02
Crop insurance **	Jan			4.21%				35.03
harvest (contract) #	Mar	contract		66.24	per ha incl fuel			66.24
Grains Research Levy				1.02%	of farm gate value			8.49

AGRONOMIC NOTES:

Sowing: Early spring sowings allow crops to flower before high temperatures cause heat stress.

Seed price is assumed to include appropriate treatments.

Insects: Alpha-cypermethrin used to control Rutherglen bug or heliothis.

Weeds: To reduce the likelihood of herbicide resistance, rotate herbicide groups and weed management techniques.

Paraquat + diquat is included as a double-knock for herbicide resistance management.

Fertiliser: Fertiliser requirements should be based on paddock records and soil tests. Any rates given are examples only.

Harvest: In a limited number of years sunflowers may need to be desiccated before harvest. Check labels and permits are current. # Harvest costs based on \$60/ha for a crop up to 2.5 t/ha with estimated increments of \$1.00 per extra 100 kg/ha above 2.5 t/ha.

Insurance: ** Varies with local government area and postcode, check with your insurer.

Marketing Issues: Sunflowers are recommended to be grown under a contract. Price deductions will occur if quality standards are not met. Three sunflowers markets are available, mono-unsaturated, poly-unsaturated and confectionery. Check with buyers prior to planting to ensure understanding of contract specifications.

For further information refer to NSW DPI "Summer Crop Production Guide 2012-13".

Use of a particular brand name does NOT imply recommendation of that brand by NSW DPI.

Always read chemical labels and follow directions, as it is your legal responsibility to do so.

LABOUR REQUIREMENTS:

- labour is not costed in this budget. If labour costs \$21.70 /hr, total labour cost would be \$13.56, reducing the gross margin to \$357 /ha.

MACHINERY ASSUMPTIONS:

Tractor: 130-140 KW PTO (173-180 HP)

Machinery costs refer to variable costs of: fuel, oil, filters, tyres, batteries and repairs.

You may need to add overhead costs as well, please refer to the Tractor and Implement Costs Guide
