## FLOWS HELP FISH AT ALL AGES

Fish need different things from flows at different times of their lives.

### ADULT

Helps adults to travel, find areas to breed, feed, return to or seek better habitat.

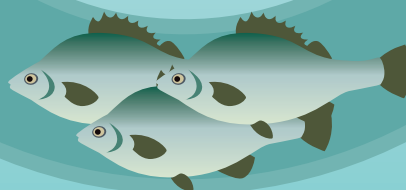

### EGGS

Some species need flows to disperse eggs; some species need their nests to be protected and not dry out.

## WHY DO FISH NEED FLOWS?

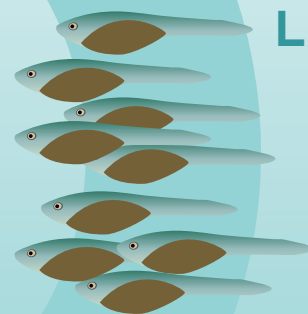

### JUVENILE

Helps young fish populate new habitats and areas that provide safety, food and shelter (nurseries).

### LARVAE

Eggs drift and hatch, larvae drift with flow.

## FLOWS HELP FISH SURVIVE AND THRIVE
