## Percentages and averages

Respondents who completed a survey but did not answer a particular question are excluded from the tabulation of results and calculation of statistics for that question.

Percentages are generally rounded to whole numbers. Some percentages may not add to 100 per cent due to:

- Rounding effects; or
- A question allowing multiple rather than single response.

Some survey questions asked respondents to give a rating from 0 to 10. Responses have then been classified based on level of rating given. Typically the classification used with ratings is as follows:

- a rating of 0, 1, 2 or 3 is classified as low;
- a rating of 4 or 5 is classified as somewhat low priority;
- a rating of 6 or 7 is classified as somewhat high; and
- a rating of 8, 9 or 10 is classified as high.

For such rating questions mean scores have also been devised.

- NB: Don't know or *Does not apply* responses have been excluded from mean score calculations.

## Weighting

The results of this survey have been weighted.

- For general population data – weights have been applied in accordance with ABS data for age and gender by region.
- For primary producer data weights have been applied to ensure even representation of each region within sample, and additional weighting of industry classification in line with ABS data for economic value of industry at state level.

## Tests of Statistical Significance

Tests for statistical significance have been conducted between particular subgroups of interest and the total sample. These tests have been undertaken at a 95% confidence level.

An exception reporting approach has been undertaken in that if no statistical significance is mentioned, there are none associated with these groups.

In graphs and tables the figures with an upwards arrow (i.e.↑) and shaded in green represent a proportion that is significantly higher than the total result. Conversely, the figures with a downwards arrow (i.e.↓) and shaded in red represent a proportion that is significantly lower than total result.
